Graph each line and match it to the zombie that it "caught".

To catch a zombie the line must run through any part of its body.

Each line should only catch one zombie. If you catch more than one you were not precise enough.

- \( y = \frac{4}{3}x + 7 \)
- \( y = x - 23 \)
- \( y = \frac{4}{3}x - 2 \)
- \( y = -\frac{3}{2}x - 22 \)

- \( y = \frac{1}{2}x - 5 \)
- \( y = -\frac{2}{5}x - 6 \)
- \( y = -\frac{1}{4}x + 22 \)
- \( y = -\frac{2}{3}x - 16 \)

- \( y = \frac{1}{3}x + 23 \)
- \( y = \frac{1}{3}x + 7 \)
- \( y = -\frac{1}{2}x - 23 \)
- \( y = -x + 10 \)
